Prologue I
Chapter I'DELTA 8988
6 million light years ago Assyria's technique, in the Andromeda-nebula, was highly developed.
Since then, many other stars have been formed.

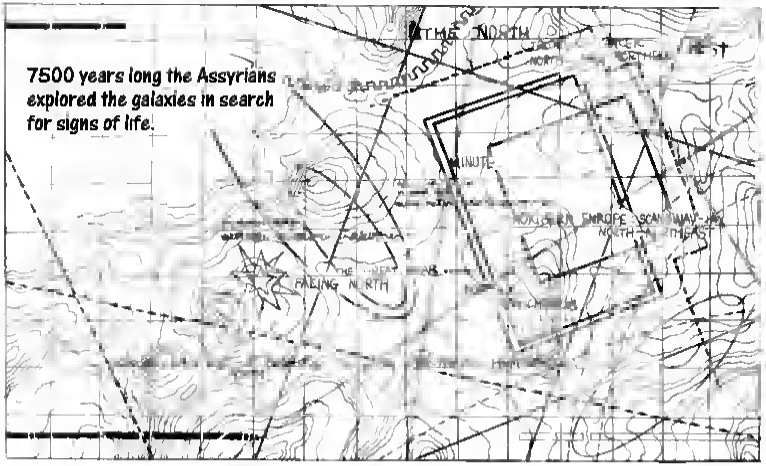
Their planet went down
caused by their own
technology.
The Assyrians were
forced to leave.

Using their well equipped spaceships;
the Assyrians started their long,
cosmic voyage.
The Alpha project became real.

Did other lifeforms exist on the stars of Andromeda and in the Galaxy?



7500 years long the Assyrians explored the galaxies in search for signs of life.

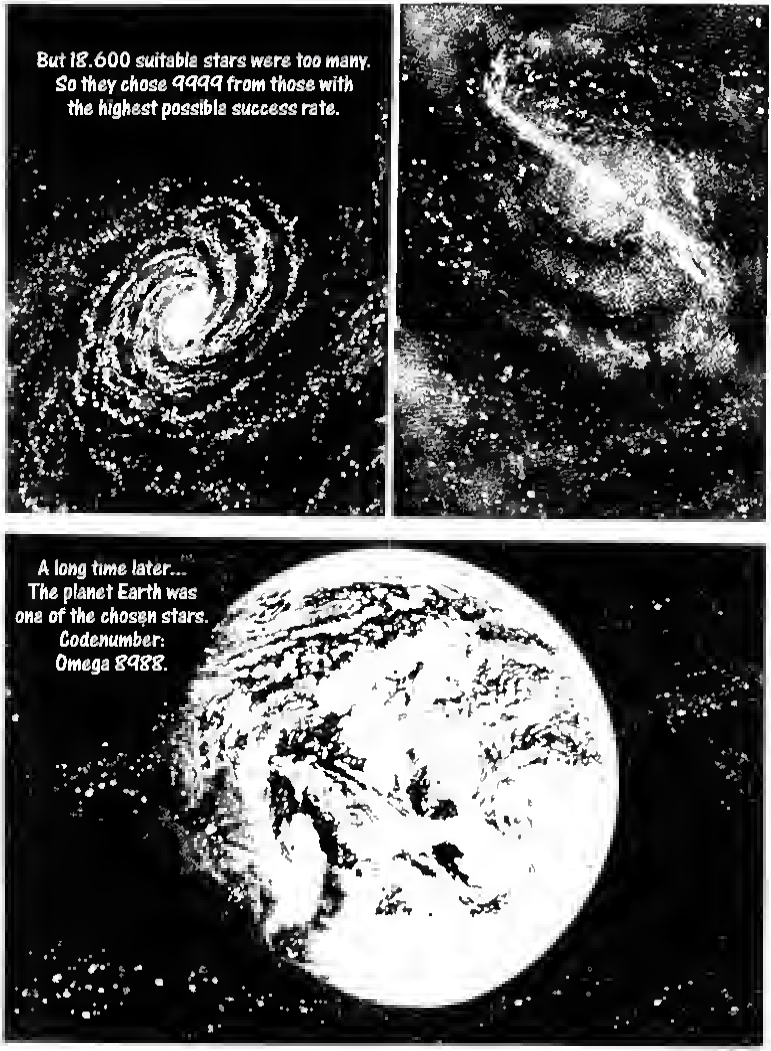
During their voyage, they discovered and analysed various lifeforms.
Nowhere in the universe did the Assyrians find a place to live. They came to the conclusion that no star was suited for their way of life and the Alpha project was canceled.

And that is how the Omega plan was born: the creation of a planet.



But 18,600 suitable stars were too many.
So they chose 9999 from those with the highest possible success rate.
A long time later...
The planet Earth was one of the chosen stars.

Omega 8988.

Time passes...
Sudden changes were happening on Earth.
Volcanoes erupted. Tectonic Plates started moving. Continents and seas displaced themselves.

Delta 8988 transposed the coacervate into DNA, millions of years will the DNA evolve into bacteria, one of these unicellulars got the attribute of phofosynthesis.
Coacervatebacterium. 280 million years later multi-cellulars came into existance on Earth: the Mitochondrion. The amoeba.
Only 120 million years later would the first human on earth appear. Delta 8988 followed project Omega closely, until one day civilization would develop.

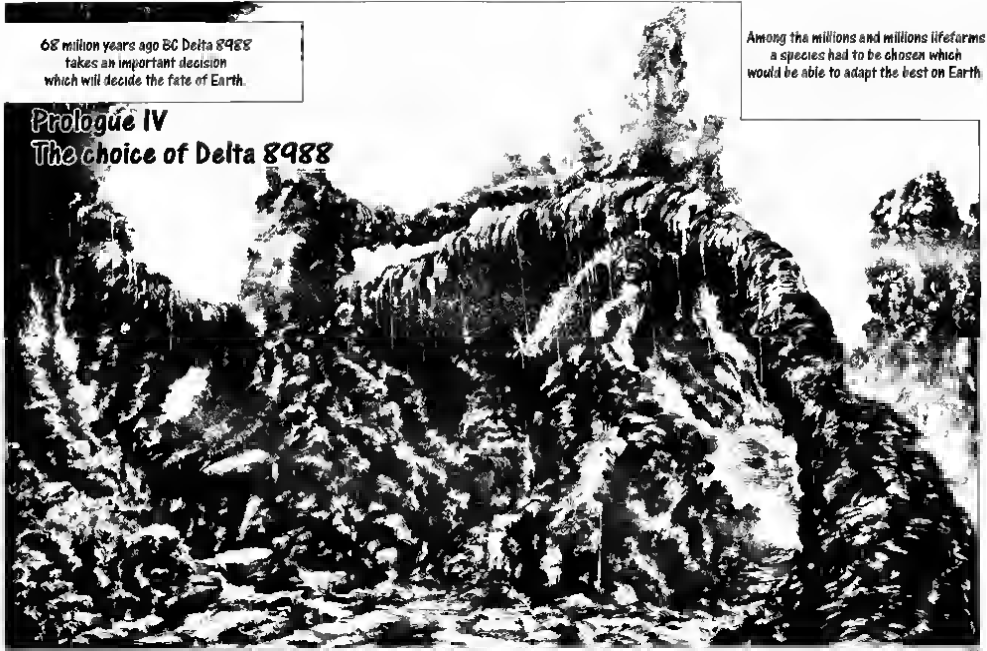
65 million years ago BC Delta 8988 takes an important decision which will decide the fate of Earth.

Among the millions and millions lifeforms a species had to be chosen which would be able to adapt the best on Earth

Prologue IV
The choice of Delta 8988

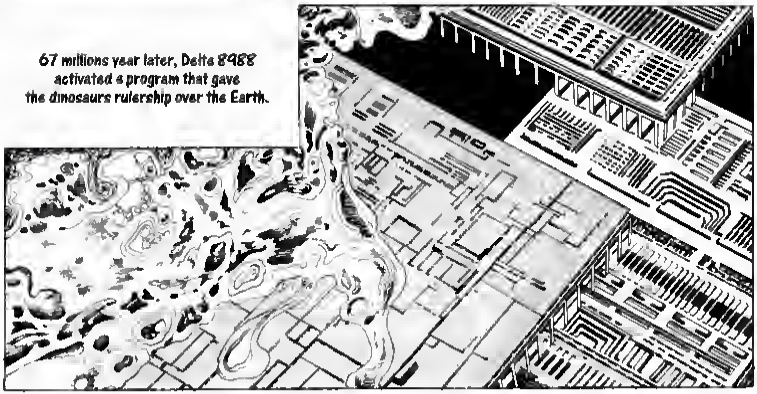


The choice took years to make .

Every species was researched with the utmost care. From the DNA to the nervous system. Also it was reviewed if the neurons, components of the brain, could store information.

At last they chose for the dinosaur, the king of reptiles.
They were the largest and strongest at that time,
the size of their brain was far above average

67 millions year later, Delta 8488
activated a program that gave
the dinosaurs rulership over the Earth.



The plan Delta 8488 was to give these, over 23 ft tall, large reptiles with green skin
and sharp jaws rulership.

I haven't had a nightmare this night
MOM, I'M GOING TO SCHOOL!

I'll have to hurry if I want to be on time

Pff!
